## Project Design Phase-II Technology Stack (Architecture & Stack)

| Date          | 27 June 2025   |
|---------------|--|
| Team ID       | LTVIP2025TMID59876   |
| Project Name  | Pattern Sense: Classifying Fabric Patterns using Deep Learning |
| Maximum Marks | 4 Marks  |

## **Technical Architecture:**

The Deliverable shall include the architectural diagram as below and the information as per the table 1 & table 2

Reference: <a href="https://developer.ibm.com/patterns/ai-powered-backend-system-for-order-processing-during-pandemics/">https://developer.ibm.com/patterns/ai-powered-backend-system-for-order-processing-during-pandemics/</a>

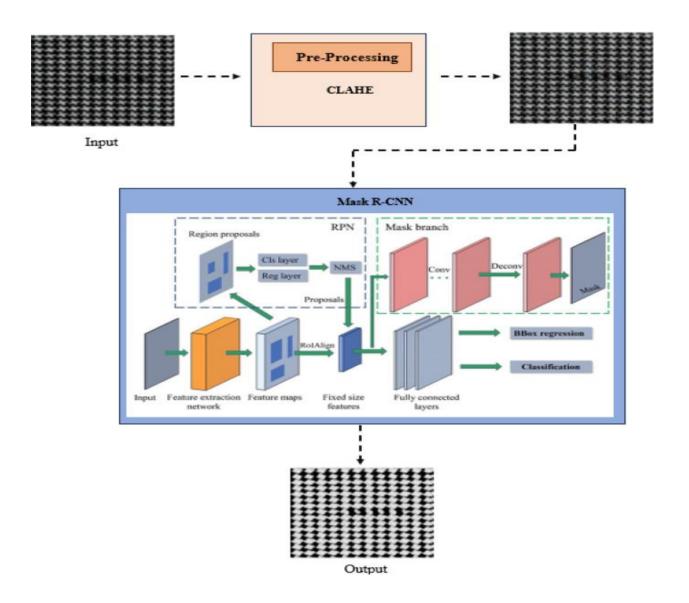

Table-1: Components & Technologies:

| S.No | Component                 | Description                                    | Technology                                  |
|------|---------------------------|--|---|
| 1.   | User Interface            | How user interacts with application (Web Page) | HTML, CSS, Bootstrap,<br>Flask (Python)     |
| 2.   | Application Logic         | Logic for a process in the application         | Python                                      |
| 3.   | File Storage              | File storage requirements                      | Stores predicted images in Local Filesystem |
| 4.   | Machine Learning<br>Model | Purpose of Machine Learning Model              | VGG16                                       |
| 5.   | Data                      | Data used to train the model                   | Dataset from Kaggle                         |

## **Table-2: Application Characteristics:**

| S.No | Characteristics | Description  | Technology             |
|------|-----------------|--|------------------------|
| 1.   | Architecture    | Layered and modular architecture                                     | REST API, MVC Pattern, |
|      |                 | separating UI, logic, model, and storage.                            | Docker, Kubernetes     |
| 2.   | User Interface  | Enables users to upload fabric images                                | React.js / Vue.js,     |
|      |                 | and view classification results.                                     | HTML5, CSS3            |
| 3.   | API Interface   | Facilitates image classification and feedback via RESTful endpoints. | Fast API / Flask,      |
|      |                 |  | Swagger for            |
|      |                 | recaback via RESTIAI enaponits.                                      | documentation          |
| 4.   | Security        | Secures user data and API access.                                    | HTTPS, JWT / API Keys, |
|      |                 |  | OAuth                  |
